Worms & Acterys & Power BI

 ACTERYS

Customer challenges

Following the company's introduction of a new Xero financial management system they

Acterys was implemented based on Azure SQL with Power BI and Excel frontends to automate the consolidation for 30 group companies and improve management reporting with interactive dashboard capabilities.

The new solution enabled Worms to completely avoid efforts and cost previously spent on manual spreadsheet maintenance in addition to significantly improved analysis and reporting options.

Acterys

Using Acterys the process to create and maintain the Worms data warehouse which loads the data from 30 Xero ERP companies was completely automated with just one click.

Worms finance staff completely autonomous maintain and extend the solution with less than 4 days of outside support.

This includes the automatically generated Power BI reports and dashboards as well as adding data from other ERP systems.

Customer Benefits

With a completely automated process the finance team have now up to date information in real time supported by powerful interactive analytics features in Power BI.

No more manual work in spreadsheets, all data is automatically available in Power BI reports or with a live, two-way (read & write) option in Excel.

Worms can now react in real-time to issues and variances in key performance in indicators.

Two weeks of staff time per month were saved with the new process.
